DESCRIPTORS: *Rubidium, *Pegmatites, *USSR,
*Beryl.

Rubidium and potassium were found in all beryl investigated. The rubidium content is in a definite relationship to the paragenetic associations of minerals which it accompanies. For the North Kola pegmatite belt the beryls are characterised by very low concentration of Rb ($< 3.3 \times 10^{-3}$ %) in beryl from the contact zone (18×10^{-3} %) to the center (up to 110×10^{-3} %).
